Background:

The protein encoded by this gene forms a complex with ERCC1 and is involved in the 5' incision made during nucleotide excision repair. This complex is a structure specific DNA repair endonuclease that interacts with EME1. Defects in this gene are a cause of xeroderma pigmentosum complementation group F (XP-F), or xeroderma pigmentosum VI (XP6).

IHC data

Immunohistochemical staining of paraffin-embedded Carcinoma of lung tissue using anti-XPF (UMAB22) mouse monoclonal antibody. (UM500022, Dilution 1:50)
